LAKE DISTRICT OUTPUT MOVING TOWARD 300,000,000 POUNDS.

Likely to Reach That Figure in Five Years -Heat Affects the Work in Nevada's Big Gold Fields-Alaskan Gold Coming In -Plans of the Utah Copper Company.

HOUGHTON, Mich., Aug. 10 .- Only three rears ago it was thought by some of the most successful students of the lake copper business that the ultimate productive capacity of the local mines would be about 200,000,000 pounds a year. This figure was exceeded last year, and will be largely exceeded in 1905, barring serious accidents of an unforeseen nature. Not only have the predicted figures of ultimate output been passed, but work now under way assures a still larger increase in the pro-duction of the future. Just how large this will prove depends upon a number of factors that cannot be accurately estimated at the present writing, but there is enough of a positive nature known to afford a sound basis for predicting a steady increase in output for several years to come.

The properties of the district may be divided into five classes, so far as present and future production are concerned, these being as follows: First, the old producing mines: second, the new producing mines; third, the developing mines; fourth, the active prospects, and, fifth, the inactive mines and prospects.
Of the first class, it may be said with safety that practically all of the old mines should at least hold their own in output for the next five years, and the aggregate production of this group of properties should show an in-

orease rather than a decrease at the end of the five year period.

Of the important old producers the Calu-met and Hecla has work under way which should result in increasing its production to approximately 100,000,000 pounds a year within the next few years. With all allow-ances made for decreasing value and other adverse factors, an increased output for the Calumet and Hecla seems certain. The Tama-rack has been a slowly declining property for the last six years. If anything there should be a small gain during the next few years. The Quincy should show an increase. The northern end of the mine is showing marked improvement at depth, and the prospects of the property are much brighter than for many years past. Atlantic should about hold its own, as should Wolverine. On the whole it will be found that the old mines of the district show large possibilities for increased production, and may make 30,000,000 more pounds of copper in 1910 than they will make in 1905.

Among the new mines there are excellent prospects of increased output. The South Range mines, controlled by the Copper Range Consolidated Company, offer the greatest prospects of enlarged production. These three mines, the Baltic, Trimountain and Champion, will make more than 10,000,000 pounds of fine copper this year, and each should be making at least 20,000,000 pounds before the close of the present decade, which means that each of these great young mines will be another Quincy by that time, while will be another Quincy by that time, while it is by no means sure that even this size will mark the ultimate capacity. On the north range, the Mohawk, which is now making approximately 10,000,000 pounds a year, is to have increased capacity, and within five years should be making 16,000,000 to 18,000,000 pounds yearly. The Michigan is another mine that 's quite certain to double or more than double present production, and the Adventure gives promise also of doubling its output.

Of the developing mines the Allouez and Ahmeek should each be making 10,000,000 pounds or better within five years. Both are producing in a small way at present. carrying drift stopes, which afford a limited tonnage of stamp rock for the mills, it being felt by both managements that the mines should obtain some benefit during the period

should obtain some benefit during the period of development from the very favorable copper market now ruling. The Superior, lying next north of the Baltic, is a promising property and should be heard from during the next five years.

Among the prospects there are enough properties of promise to guarantee that from the number several good producers will be secured. The Globe tract, lying next south of the Champion, is under option to the Copper Range Company, and in view of its immediate contiguity so the Champion, which is the richest of the South Range mines, cannot be regarded as other than a property of exceptional promise. Unfortunately the overburden is very heavy and very difficult of penetration, but the Copper Range company has ample funds to overcome all unfavorable features surrounding the early stages of development. About midway beoverburden is very heavy and very difficult of penetration, but the Copper Range company has ample funds to overcome all unfavorable features surrounding the early stages of development. About midway between the Globe and the Winona mine is the Erie-Ontarie prospect, on which steady work has been performed for some months past. The results, while insufficient to show certainty of making a mine are strongly favorable, and if a mine is made at this point it is almost certain that mines will be opened on adjoining properties. To the northward the Miskwabik has a promising property, apparently carrying the northern extension of the Kearsarge lode. The Tecumseh has cut a very rich drill core from the Rearsarge lode and this is full of promise to the Rhode Island, where six years have been spent in opening a series of heart breakingly hungry amygdaloids. The little drill core in question also promises well for the Franklin Junior, where a careful and intelligent management is occupied in getting a new dollar for an old one-upon a normal market, with a few cents loose change profit when copper is 18 cents a pound, as at present. The Arcadian—way the utterly damned Arcadian—may come in for some of the pie, if the Kearsarge lode reaches that far south, with workable values—and it must be said for the Kearsarge lode reaches that far south, with workable values—and it must be said for the Kearsarge lode reaches that far south, with workable values—and it must be said for the Kearsarge lode reaches that far south, with workable values—and it must be said for the Kearsarge lode reaches that far south, with workable values—and it must be said for the Kearsarge lode reaches that far south, with workable at any point opened.

Among the developments of the next five years should be the opening of a mine on section 16 tract, and the location of the extension of the Palitic lode upon the tract in question is closely approximated.

In Keweenaw county there is much activity in the extreme southern end, at the Allouez, Almeek and Mo

MONTANA.

BUTTE, Aug. 8.—It is stated on good authority that there were shipped from the Washoe smelter in June more than 15,000,000 pounds of copper, and that the July shipment was but little less. As the Washoe produces little more than half the copper of the Butte district the total output was in excess of 30,000,000 for each of the two months. The production for August will be lower.

The North Butte Company is shipping ore that runs as high as 100 pounds of copper

MINE PUMPS.

MINING.

STATION AND SINKING MINING PUMPS.
THE SLOGAN OF THE CAMERON—
"CHARACTER THE GRANDEST THING."
Over 40,000 CAMERON pumps in daily satisfactory use all over the world give tangible proof of their merit and confirm the claim for their superiority over all others. They are conceded to be the most durable, reliable and effective mining pumps on the market to-day, and while often in tated are never equalled. For proof, inquire of any mining engineer, for the latest catalog "C" and prices, write any of our resident agents or direct to the S. CAMERON STEAM PUMP WORKS.
Foot East 23d St., New York City, U. S. A.

to the ton. The success of North Butte has stimulated copper mining in the couside portions of the Butte district and several other big companies are in formation, the purpose being to combine a number of producing mines.

Several Butte men have opened a copper mine in Lemin county, Idaho, and have made a strike of 30 per cent. copper ore.

Senator Clark is building a 350 foot stack at his Butte reduction works. It is being built entirely of cement and has reached a height of 100 feet.

The mines of the Granite Mountain and Bimetallic company at Philipsburg, owned by St. Louis capitalists, have been permanently closed and the property will be dismantled. The two miaes had been famous silver producers since 1875, and the gross output of the two miaes had been famous silver producers since 1875, and the gross output of the two miaes had been famous silver producers since 1875, and the gross output of the two miaes had been famous silver producers since the demonstration of silver have been shall. By closing the two mines 250 men were thrown out of employment.

The Minnie Healey mine of the United Copper Company was closed for several weeks on account of a break in the mine resumed operations a few days ago.

NEVADA.

GOLDENIND AUX 7.—The summer heat has

NEVADA. GOLDFIELD, Aug. 7.—The summer heat has caused considerable slowing up in work, but many new arrivals are recorded every day and there is constant activity in the recording of transfers of claims. All the big mines are turning out ore, but there is very little shipping, as managers prefer to wait until they can get rail communication. It is estimated that Goldfield's population is now 10,000.

they can set rail communication. It is eatimated that Goldfield's population is now 10,000.

RENO, Aug. 6.—In the famous De La Marmine near Roche, Nev., has recently been uncovered some of the richest ore ever found in the State. The strike was made on the lowest level, 1,100 feet below the surface. The ledge is from four to five feet wide and there are rich seams that carry as high as \$1.000 to the ton. Throughout the ledge the ore is good milling, which will yield excellent profits. The extent of the vein is not yet known, but if it continues rich as the shaft is sunk, the find will bring great value. The mine was bought from Capt. De La Mar by Bamberger of Salt Lake.

The Palmetto King mine pear Lida has shown up a ledge four feet in width that assays over \$100, with streaks that go as high as \$355 and \$375 a ton. In the Palmetto Florence a twelve foot ledge of \$85 ore has been uncovered. These mines are twenty-two miles below Lida.

In the Painted Mountains near Luning A. H. Lee and H. C. Cutting have discovered ore that runs as high as \$150 a ton in gold and silver. As the ledge is only a short distance from the Carson and Colorado Railroad ore worth \$20 a ton can be hauled with profit.

In the White Horse district De Witt Borce.

road ore worth \$20 a ton can be hauled with profit.

In the White Horse district De Witt Borce and his associates from Pittsburg recently made a hucky strike in the Ora group, a half mile northwest of Olinghouse. The group is under a \$25,000 bond to Borce, who has also a \$35,000 bond on the Sheehan mine adjoining. The strike was made at a depth of 75 feet and 150 feet from the mouth of the tunnel. The workmen first struck some nuggets and then were amazed to find heavy stringers of quartz that were nearly pure gold. These stringers extended for ten feet across the tunnel. Soveral were as large as the palm of a man's hand.

of a man's hand.

ALASEA.

SEATTLE, Wash., Aug. 7.—Shipments of gold from the Tanana are coming out by the way of Dawson and Nome, after having a close call from the road agents at Fairbanks and other points along the route. The last shipment, received on Thursday, amounting to \$400,000, came through by way of Dawson without any trouble. There is plenty of water in all the streams and no trouble is anticipated at any of the camps. A mania for railroad construction appears to pervade the entire country, and scarcely a vessel has sailed from the Washington or British Columbia ports but has carried more or less railroad material, and at the present time there are four railroads under construction with from 25 to 100 miles of line completed and operating.

with from 25 to 100 miles of line completed and operating.

The Singer-Conrad mines on Windy Arm sent thirty men north yesterday to work on the mines and to construct buildings and the aerial tramway. Besides the men employed on the branch lines of the Yukon and White Pass, a big force has been placed on the main line. The branch is twenty-five miles long, and it is expected that this will be completed this season. It is said by the owners of these mines that they have 35,000 tons in sight at the mines and that they can employ from 500 to 500 men to advantage this fall and winter.

Four canal companies have been formed to construct canals in the Seward Peninsula country. These canals will be from 25 to 35 miles in length and will open up a very rich country that has already produced a great deal of gold. They have been delayed in securing funds, but are now in position to push the enterprises with great energy.

In the Atlin and Skagway districts forest fires have been destroying a great deal of timber and the Government is now employing a force of men to get them under control.

COLOR ADO.

COLOR ADO. COLORADO.

COLORADO SPRINGS, Aug. 11.—The Guggenheim Exploration Company of New York has taken the entire issue of \$3,000,000 of bonds made by the Utah Copper Company, composed of Colorado Springs capitalists. Of the issue \$750,000 will be applied to the redemption of a previous issue. The remainder will be applied to the construction of a 6,000 ton mill at Bingham, Utah. Work will begin at once and by spring installation of machinery will begin. In connection with of machinery will begin. In connection with the reduction works at Bingham the com-pany will have a total daily capacity of 7,000

the reduction works at Bingham the company will have a total daily capacity of 7,000 tons.

The Mine Owners' Association is making a strong effort to stop high grading, that rich ore stealing by miners, which it is claimed amounts to \$6,000,000 annually. Several arrests have been made recently.

Ore has been struck in the summit of Alpine Pass which carries 35 to 50 per cent. copper, with pay gold values.

The El Paso drainage tunnel which penetrates Beacon Hill and taps a portion of Raven is now discharging 4,000 gallons of water a minute, against 7,000 when first opened. Water is now standing at an altitude of 8,890 feet above sea level, or about 90 feet higher than the drainage tunnel itself. Mines on the west slope of Beacon Hill are dry to 800 feet depth and on Raven Hill to 800 and 700 feet, while on Gold. Globe and Womack hills the mines are working at 1,000 feet depth without encountering water. By the time the proposed second drainage tunnel is completed, three years hence, at 800 feet greater depth, the El Paso will be dry.

Hearne and associates leasing on the Des Moines on Ironolad and Raven Hills are erecting a large cyanide mill capable of treating all the low grade ore in that district.

The new ore shoot opened up in the Portland mine in virgin territory at 1,300 feet depth is yielding from \$200 to \$1,200 a ton. The shoot is wide enough to insure big returns for years.

The Buena Vista Ore Buying, Smelting

land mine in virgin territory at 1,300 feet depth is yielding from \$200 to \$1,200 a ton. The snoot is wide enough to insure big returns for years.

The Buena Vista Ore Buying, Smelting and Power Company has been incorporated under Arizonas laws to build a smelter at Buena Vista. The company owns patent rights in the United States for a new smelting and power process for heating and reducing ores. The inventor guarantees to produce a heat of 4,595 degrees Fahrenheit in two and a haif hours, at thirteen pounds pressure, which usually requires eight hours. Ores containing \$5 a ton values can be treated at a profit. Smelting charges of \$2 a ton will be made. The initial capacity will be 300 tons daily. Charles A. Kuenzel is president of the company and inventor of the process. A building site of several acres has been secured a mile north of the business center. A vast tonnage of \$3 core is immediately available.

The Hamlet Mining Company's new fifty ton mill, four miles north of Silverton, is working satisfactorily, turning out several cars of concentrates weekly for the Durango smelter. The plant's product is first in lead, second in copper, and third in zinc. Later appliances will be installed for handling zinc separately. The Hamlet mine will produce all the ore the mill can handle until enlarged. The Silver Ledge mine and mill, located at Chaitanooga, seven miles northwest of Silverton, is under lease to Kramer & Carmichael, whose first shipment of zinc consisted of two carloads, the weekly output. The mill is equipped with magnetic separators for handling zinc.

The Isabella Mines Company, in which New Yorkers are interested, is pushing development work on the Empire State shaft. The shaft will be sunk 500 feet, or 1,350 in all. The territory is practically new, and rich returns are expected based on developments above the \$50-foot level.

New York and Pennsylvania capitalista are interested in an important strike reported in the \$00-foot east level of the Pittsburg mine in the Russell district, Tippett, Joh

regular dividend payer and has been successfully operated for several years.

CALIFORNIA.

SAN FRANCISCO, Aug. 6.—A big rush to the Panamint country in Inyo county is predicted for this fall. The isolation of the Panamint Mountains has kept this district from being properly prospected, but the great tide of travel into the Bullfrog and Goldfield districts has brought this remote region into notice and many rich discoveries have been made. The ledges bear a close resemblance to those of the Nevada camps.

Four new dredgers at the Yuba Consolidated gold fields will be ready for work this fall, while two others have just been begun. In the adjoining mine the Marysville Gold Dredging Company has two machines in process of construction. With the two new working there will be ten big dredgers taking out gold by Nov. 1.

The Sierra Buttes mine near Sierra City is installing a forty stamp mill and will put up another mill of the same size next season.

The mine has a large amount of low grade ore which can be worked very cheaply.

In San Gabriel cañon, Los Angeles county, S. G. Bragg of Covina, while camping out on his vacation, discovered a ledge of porphyry rock which assays \$423 in gold to the ton. This rich ledge has lain undiscovered for years within 100 feet of the regular road traveled by the San Gabriel stage. It can be traced for several thousand feet.

It is reported that the Dairy Farm coppergold mine in Placer county has been sold to the Guggenheims for \$250,000. The ore is extremely rich in copper.

The old Cowboy mine one of the richest properties in the Amelle district of Kern county, has been bonded by the owners to Los Angeles capitalists for \$180,000. The ores are all base, but the values are so high that it pays to ship the ore to San Francisco for smelting.

After years of litigation the rich mines in for smelting.

After years of litigation the rich mines in Browns Valley, York county, will be worked. Last week a quitclaim deed was recorded by one of the contestants to the others, and work of development will begin at once. The ledges are extensive and rich in gold.

SEATTLE, Aug. 7.—On Renton street yesterday men engaged in digging a well for the district school struck pay dirt that assayed well. A number of claims were taken up. Coal has been found, and copper and lead also, but this is the first time the residents have been excited over gold.

Prospectors are making important strikes this season on the headwaters of Lake Chelan, and some splendid copper and aliver leads are being opened up.

WASHINGTON.

BRITISH COLUMBIA. SEATTLE, Wash., Aug. 7.—The wharf, tramway and concentrator of the Britannia, together with other necessary buildings for the conducting of a large and satisfactory business, are all nearly completed at Howe Sound and the wheels will be put in motion during the coming week. UTAH.

SALT JAKE, Aug. 7.—In the Utah and Nevada Company's property in the Newfoundland district there has been found a narrow wein which carries good values in free golf. The tunnel and winze are buried in rook that will run from \$55 to \$90 a ton.

The Utah Consolidated at Bingham is still exploring a body of ore whose dimensions are an agreeable surprise to the management. The cross cut in which the body was encountered has been driven laterally through the vein for sixty feet without striking the second wall, and a drift along the strike of the lode, after continuing for 150 feet, is still surrounded by the mineral bearing rock. Until more work is done the management cannot announce the magnitude of the discovery, nor even state with certainty whether the channel is the old or a new one.

The directors of the Utah Copper Company have voted for a \$3,000,000 bond issue with which to take up its outstanding bonds and complete its new copper reduction plant.

The copper output for July from the valley smelters exceeded \$,000,000 pounds of matte and bullion extracted from Bingham ores.

The number of men employed at Bingham now is cover 3,000. There are 500 more men employed there now than there was a month ago, and the output has increased by 250 tons a day.

FAKES OF THE HUCKLEBERRIES. They Have Plenty of Fun, but the Storm Carries Off Most of Their Clambake.

NEW ROCHELLE, N. Y., Aug. 13 .- At their annual burlesque and clambake to-day the members of the New York Athletic Club and the Larchmont Yacht Club presented the "Yankee Circus on Mars" at Huckleberry Island, book by Clay M. Greene and music by the band. A new feature of the circus was the appearance of a man in the ring who impersonated President Roosevelt. He steamed into the island on a launch and was greeted by the tooting of whistles from the yachts and the booming of cannon. He was clad in Rough Rider uniform and wore glasses and teeth. A band of "Huckleberry Indians escorted him to the ring, and he

"Boys. I am dee-lighted to be with you I hope you'll have a good time. I'd like to stay to see the show, but I've got to get back to Oyster Bay and patch it up between nations which are unfortunately at war."

Then he mounted a stage horse and dashed off down the hill, where the launch was in waiting for him.

The clubmen saw the circus from benches erected around the sawdust ring. Owing to the hot weather most of them work bathing suits. The show was preceded by a parade. Capt. Chapman was grand marshal. He was mounted on a wooden charger. The women riders and jockeys rode wooden horses with feather dusters

Clay Greene had been billed to walk the rope. There was great applause when he fell off. His nephew, Dr. Greene, who was also made up as a clown, did the real rope walking and then did some sleight of hand

A three round bout, Duchess of Marlborough rules, between amateurs representing the Huckleberry Indians and the Flub Dubs of Larchmont was interrupted by a shout of "We're pinched; here come the cops!" A man made up as Police Captain Chapman jumped into the ring. The yachtsmen always burlesque Chapman because he arrested some of them at the Seeley dinner. The managers of the fight passed the fake police captain a bunch of stage money and he went out in a hurry. Then the champions went at it again. Between the rounds their seconds rubbed them with sea weed and equirted seltzer in their faces. Just as the show ended and the clambake was announced, a thunder storm broke loose. Some of the clubmen who had on bathing suits were fortunate enough to get a part of the feast, but in a short time the lobsters were submerged and the chickens drifted away. A three round bout, Duchess of Marl-

LAWYERS AIDED BELCHER.

Proper Search of Titles Would Have Shown Him Up Long Ago.

PATERSON, N. J., Aug. 18.-A semi-public meeting of the Manchester Building and Loan Association will be held in the gild hall, Haledon, to-morrow night. The meeting is for the purpose of considering the condition of the association. As far as possible a detailed statement will be made of the Belcher stealings on mortgages held in the association's name, and it is likely that candidates to fill the office of president, which the missing Mayor held continuously for seventeen years, will be named. The meeting will be an interesting one, inasmuch as the board of directors and the officers will be asked to tell how it was that an unbonded officer of the association had the handling of so many of the loans, by which the association members will responsible for a loss, it is estimated, of \$15,000 or more. An interesting phase of the mortgage end

of Belcher's transactions developed last week. On three pieces of his property he had fourteen mortgages. Nearly all these mortgages bear searches by lawyers certifying that the property was unencumbered. It is held by reputable lawyers that the

It is held by reputable lawyers that the certification of an attorney as to the non-encumbrance of the property makes him liable for loss sustained by the mortgagee, professionally if not legally.

Many of the attorneys who made searches for Belcher probably took his word for everything for some of them were defrauded by Belcher through notes. It is said also that where some of the searches showed encumbrances against the property such indications were erased by the fugitive.

Belcher's crookedness in the mortgage end of his transactions, in which he used a spurious rubber stamp, has made much spurious rubber stamp, has made much trouble at the County Clerk's office. Beltrouble at the County Clerk's office. Belcher's stamp was square and similar to the one used in the County Clerk's office previous to 1897. At the present time a round rubber stamp is being used by the County Clerk. Hundreds of persons with square stamped mortgages have visited the court house to verify the records.

Lawyer Jacob Vanderclock of the Paterson Savings Institution said to-day that as long ago as last year Mayor Belcher asked him to look up all countries where extradition treaties were in effect. Mr. Vander-

dition treaties were in effect. Mr. Vander-clock prepared a list at the time, little think-ing that Belcher wished to have the infor-

POTTER TALKS TO CHILDREN

BISHOP TELLS OF THE POWER OF HUMAN SYMPATHY.

The Language of the Hand More Potent ment Because Bain Interfered With Outdoor Meeting-Audience Drenched.

Plans had been made for Bishop Potter to address his first open air meeting under the trees of the Cathedral close of St. John the Divine yesterday, but the rain drove a somewhat wet and bedraggled audience of several hundred persons into the hall the Cathedral synod house. It was a disappointment to the Bishop that the arrangements were interfered with by the weather, and he told his hearers so.

The open air meetings for summer Sunday afternoons were begun some weeks ago as the result of a long cherished plan of the Bishop, and are maintained largely at his expense, particularly the feature of bringing children from the Chapel of the Epiphany, the former pro-cathedral, down in Stanton street. So he journeyed down on Saturday from Cooperstown, where he is spending the summer and incidentally acting as rector of the Episcopal parish there in the absence of the rector, to see what success was attending the summer

By the time the service began the contingent from Stanton street, which yester-day numbered 150 or more, had got a thorough drenching. Nevertheless they were rounded up by several energetic desconesses and led into the synod hall. Some hymns were sung and a brief service said by Canons Peters, Vorheis and Gilliss. Then

Canons Peters, Vorheis and Gilliss. Then Bishop Potter made his address, directing his remarks principally to the children. He mentioned what he declared "you may term coincidences, if you like, but what I should term rather happy providences." He told the children that there was a singular appropriateness in their presence in the synod hall, inasmuch as it had served as the home of the Leake and Watts Orphan Asylum.

One of the hymns the Stanton street children sang with particular enthusiasm was "Stand Up for Jesus."

"I can do nothing better than to tell you the story of that hymn," said the Bishop. "It was written by a Presbyterian clergyman of Philadelphia, the father of the Rev. Dr. Duffield of this city, I think. He got the theme from the deathbed utterance of a clergyman of this Church; who was driven from his Philadelphia pulpit because of pro-slavery utterances, and whold as he was drived her result of accidents told those around him to 'stand up for Jesus."

"What an enormous power the need for

Jesus. "What an enormous power the need for "What an enormous power the need for sympathy gives us," concluded the Rishop. "For what good you and I might exercise it if we but would. There is source a day or a moment that any life beside you or me has not a heavier task than yours or mine. One word would lighten that task im-

measurably.

"But beside the spoken word there is the language of signs, the language of the spoken word.

spoken word. Social intercourse would be small were

"Social intercourse would be small were it not for our sign language, which is almost as great a necessity among dvilimed peoples as among those who first used it.

"Take that back downtown with you and remember above all things that you cannot, you must not, build a wall around your own life so that it cannot touch the life next you. Think always, children, how by your uplifting and leading hand you can help other lives, remembering that your Lord and Master never helped any one without putting forth His hand and touching him."

ENGAGEMENT RIOT FATAL The Mother of the Rejected Sufter Dies

of a Bullet Wound. Mrs. Gatamella Fizzo, 48 years old, of 451 Carroll street, Brooklyn, one of the six victims of the riot which enlivened the festivities attending the engagement of festivities attending the engagement of Mary Mazella, 20 years old, to Amate Marroa, at 454 Carroll street, on Saturday night, died a few hours after her removal to the hospital. She was shot in the head by one of the numerous bullets discharged during the fight.

It is thought that her son, Giuseppe Figgo 22 years old, the rejected suitor of

the Mazella girl, who started the rumpus, fired the fatal shot. The other five victims who are suffering from bayonet and knife
